

Project Title:

Standard Laptop Procurement Automation using ServiceNow Flow Designer

Project Description:

The Standard Laptop Procurement Automation project focuses on automating the process of requesting, approving, and assigning laptop procurement tasks within an organization. The system is built using ServiceNow and leverages Flow Designer to streamline the workflow.

The solution allows users to request a standard laptop through the Service Catalog. Once the request is submitted, it goes through an approval process. After approval, the system automatically creates a Catalog Task, updates the request details, and assigns it to the Hardware team for further processing.

This automation reduces manual effort, minimizes errors, and improves efficiency in IT service management.

Technical Architecture:

The project follows a ServiceNow-based workflow architecture:

- **Frontend:** Service Catalog (User request interface)
- **Backend:** ServiceNow platform (Flow Designer automation)
- **Modules Used:**
 - Service Catalog
 - Requested Items (RITM)
 - Approval Engine
 - Flow Designer
 - Catalog Tasks

Pre-requisites:

- Basic knowledge of ServiceNow
- Understanding of Service Catalog
- Knowledge of Flow Designer
- Basic understanding of ITSM concepts

Project Workflow:

Milestone 1: Service Catalog Setup

- Create “Standard Laptop” catalog item
- Add required variables (Employee Name, Department, Laptop Type, etc.)

Milestone 2: Approval Process

- Configure approval workflow
- Assign approval to Manager

Milestone 3: Flow Designer Automation

- Create flow triggered on request submission
- Add approval condition
- Create Catalog Task after approval
- Assign task to Hardware group
- Update short description

Milestone 4: Testing

- Submit request from Service Catalog

- Approve request
- Verify task creation and assignment

Milestone 5: Implementation & Output

- End-to-end automation achieved
- Reduced manual intervention
- Improved process efficiency

Working Process:

1. User opens Service Catalog
2. Selects Standard Laptop
3. Clicks Order Now
4. Request is created (RITM)
5. Manager approves request
6. Flow Designer triggers automation
7. Catalog Task is created
8. Task assigned to Hardware team
9. Status updated automatically

Conclusion:

This project demonstrates how ServiceNow Flow Designer can be used to automate IT procurement processes efficiently. By integrating Service Catalog, approval workflows, and task automation, the system reduces manual work and ensures faster service delivery.

The project highlights the importance of workflow automation in modern IT service management systems and provides a scalable solution for handling hardware requests.

Future Scope:

- Add email notifications
- Implement SLA tracking
- Add dashboard for monitoring
- Extend to other hardware requests
